1. I draw your attention to the ANR newsletter that is included at the end of the meeting package. The date is 14th May. The 28th May edition's lead article is co-authored by Darlene Yap-Lee commenting on the FAA Noise Policy Review. The article notes that one issue to address is to bring the FAA's Noise Policy into the 21st Century.

   Please use the expertise of the members of the Public.

   Please thus consider having Darlene Yaplee give her UC Davis, ANE presentation on Aviation Impacts to the full SFO Round Table. The Round Table would benefit from a short and accurate community perspective. Al Royce, the head of the Legislative Committee gave the presentation a ringing endorsement at the last Round Table meeting.

2. Can the minutes note what members of the public say? At the moment no comments from the public are noted. Why is this important? We keep on returning to the same subjects that the public bring up. Also many members of the Public have been attending Round Table meetings for longer than many members of the Round Table and hold some part of the institutional memory. Please also consider finding software that can transcribe the meeting recording to have a record that we can search on.
3. Please consider making a policy that all graphs presented at the Round Table and Technical Working Groups can be understood when viewed in black and white. I and many others do not have color printers. Currently many graphs distinguish lines by color. Please make lines broken or similar so they can be distinguished..

Thank you
Peter Grace
