Subject: Question for roundtable meeting on Aug 7th

Hi,

I wanted to ask the following question for regular agenda-

I am a resident of Foster City. Given the high noise levels and frequency of aircraft flying over our community, I wanted to know the best way to obtain statistics and data of aircrafts landing in SFO. I know SFO collects a wealth of data and I wanted to know the best possible way for public to access this data. For example, can we get details of landing flight path, time of day, origin of aircraft, type of aircraft, weather condition etc.? This will help the public understand the trends in flight patterns over a period of time.

Thanks.

Regards
